TEST	RESULT
Canine Pneumovirus RealPCR	<sup>a</sup> POSITIVE

---

<sup>a</sup> A POSITIVE CANINE RESPIRATORY PANEL PCR result indicates the detected organism(s) is likely contributing to the clinical signs. Additional causes should be assessed separately. Vaccination with a modified live vaccine may result in positive results for up to a few weeks post-vaccination.

A NEGATIVE CANINE RESPIRATORY PANEL PCR result indicates that the organism was not detected in this sample and suggests the absence of an infectious cause, by these organisms, for the clinical signs. PCR may not detect 100% of the isolates or levels of the organisms may be too low to be detected.
